

Heating Hoses

Pressure Hoses

When choosing a pressure hose, please observe the minimum bending radius in order to avoid leakage.

Armatures

Our standard heating hoses have armatures made of bichromate machining steel. We also offer armatures made of stainless steel (1.4301 / 1.4571) or brass. The durability of the heating hose and armature should correspond. On request, the heating hoses can be equipped with loose flanges or integral flanges, according to DIN and ASA.

Please consider that armatures narrow the passage of the hose! See table on left.
